$$CRUSHING = (2.961 - 2.522) / (2.961 + 2.522) = 8\%$$

$I = 1.676 \text{ in}^4$  (from AutoCAD)

Point B:  $OD_1 = 3.307''$ ,  $I = 4.613 \text{ in}^4$

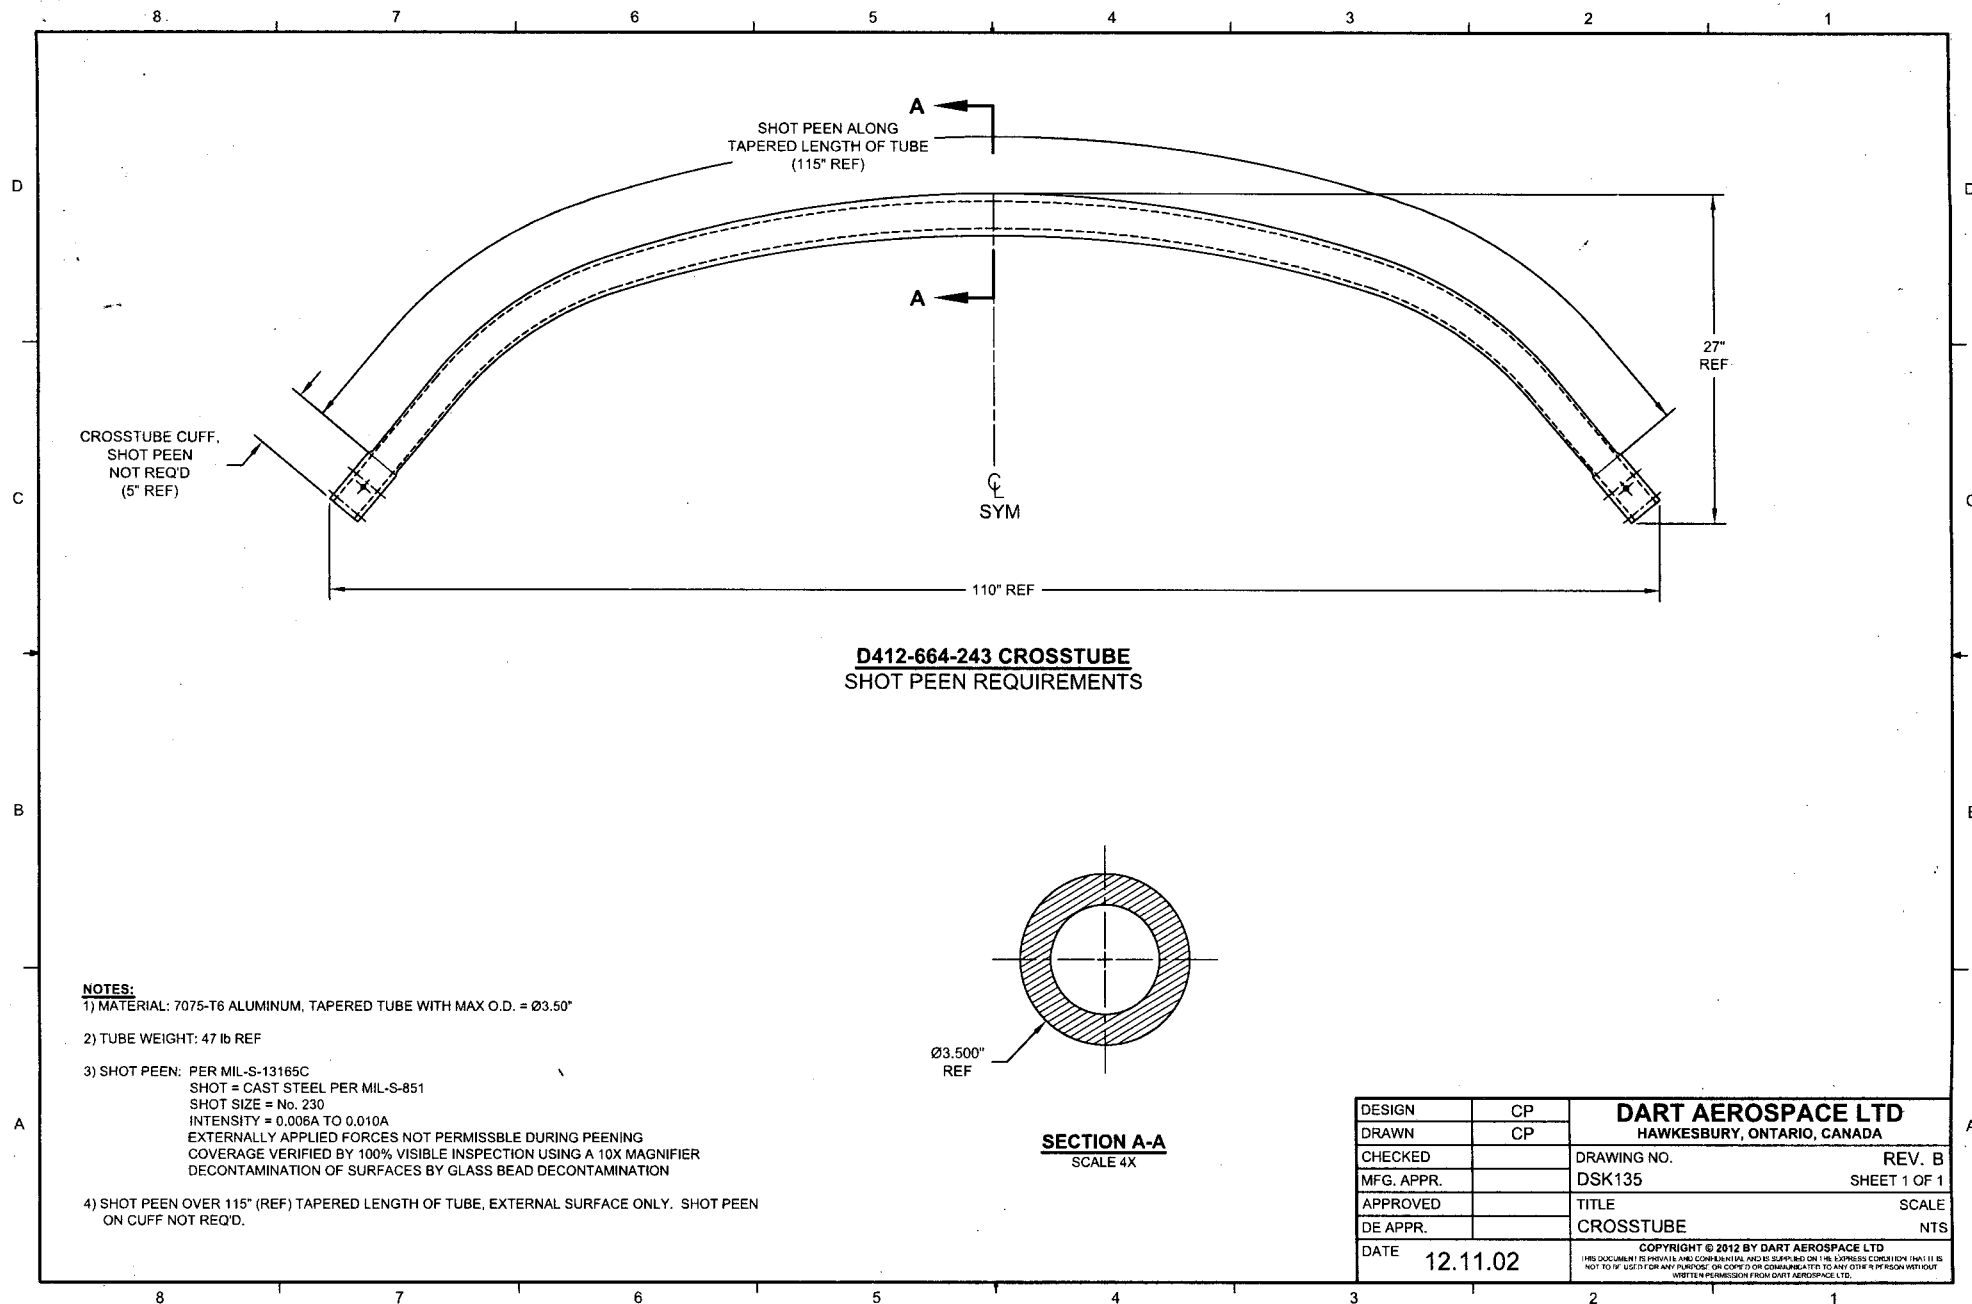

A:  $F = M_c / I = P \times 13 \times 2.961 / 2 \times 1.676 = 11.484 \cdot P$

B:  $\quad \quad \quad = P \times 40.875 \times 3.307 / 2 \times 4.613 = 14.651 \cdot P$

$$M.S. = 14.651 / 11.484 - 1 = 0.27$$

∴ Tube will break at rocker beam contact before area of 8% crushing, 8% crushing in area at end of tube bend is acceptable

LL/IEK

Just saying it out loud

Our plan for the on-going 412 crosstube testing is to make two more high afts. The new twist is that we want to have them shot-peened. I think Bill mentioned that a place was found in Montreal that will do this.

Chris is preparing a sketch that specifies the location and spec for the shot peening.

THEN, we want to have ONE of the shot-peened tubes anodized like the last one.

Therefore we would be sending to Exova: One shot-peened/alondined and one shot-peened/anodized.

So if you could figure this into the schedule over the next couple of weeks, that would be great. And we will get the shot-peening sketch to you by Monday or Tuesday.

All,

I spoke you Brad at Curtis Wright and he will require a purchase order for the Piece Price (Qty. 3), set-up(one time) ,  
programme development (one time) and tooling (one time).

He will require information for the parts(dimensions, process and material composition).

Once they have the purchase order they will then develop the process plan for treating the parts. This will take 3-4 days  
to carry out.

I located a Crosstube the back shed which was returned from a customer with zero time due to shipping damage, if you  
are fine with this part it can be striped, measured and shipped to Curtis Wright to see the affect from the shot peening  
dimensionally.

Does this sound like a okay process plan?

Pat
